Severity of Alopecia Tool (SALT)

Site: U00 | Subject ID: 93-309 | Visit: Visit 1 - Screening
Rater: H-S | Status: Administered | Assigned: H-S
(gi) General Instructions

- Severity of Alopecia Tool (SALT) measures amount of hair loss (absence of hair) AT CURRENT VISIT, without review of previous visit SALT score(s).
- It is important to note that there should be no correction for male or female pattern hair loss. For consistency, SALT assessments should be performed on hair missing from a full head of hair for the patient, regardless of a contribution of any pattern hair loss.

Image Capture Guidance
The most important items to keep in mind when taking photographs are hair pinning, camera positioning, and image clarity.

The photography environment should remain the same. The same well-lit space should be used at each photography session. Subjects should be positioned in front of the same neutral background (flat blue or grey, etc.). Subjects should remove their jewelry prior to taking photos. For consistency in camera angle and to prevent shadows, Subject and photographer should be at the same horizontal level, preferably sitting on stools. Tablets should be held completely parallel to the photographed area.

The captured images are clear. Do not capture blurry images. Confirm multiple images are clear and suitable for a final image selection before moving to the next session.

Ⓛ Left Quadrant

Rating

The Raw Score: Percentage of hair loss between 0-100, recorded as a whole number. Zero corresponds to no hair loss in the quadrant and 100 corresponds to complete hair loss in the quadrant.

● Please enter the quadrant raw score indicating the % hair loss in the patient's left quadrant.

> 50

Image Capture Guidance

- Section hair according to left quadrant boundaries; hair outside boundary should be pinned back to ensure accurate assessment

- Center ear in middle of camera frame

- Ensure head is fully captured within the camera frame with approximately 1" border around the head

- Ensure image is in focus

● Left Quadrant Image Capture

If image is omitted, enter reason.

Ⓡ Right Quadrant

Rating

The Raw Score: Percentage of hair loss between 0-100, recorded as a whole number. Zero corresponds to no hair loss in the quadrant and 100 corresponds to complete hair loss in the quadrant.

• Please enter the quadrant raw score indicating the % hair loss in the patient's right quadrant.

| 50 |

Image Capture Guidance

- Section hair according to right quadrant boundaries; hair outside boundary should be pinned back to ensure accurate assessment
- Center ear in middle of camera frame
- Ensure head is fully captured within the camera frame with approximately 1" border around the head
- Ensure image is in focus

• Right Quadrant Image Capture
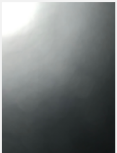

If image is omitted, enter reason.
