CDISC Strategic Goals 2013-2015

- Refine, support and provide education on existing foundational CDISC standards
- Expedite development and rollout of new therapeutic area standards
- Achieve significant progress in enabling interoperability between clinical research and healthcare
- Develop CDISC SHARE
- Forge productive global collaborations

PUBLIC RELEASE OF ALZHEIMER'S CLINICAL TRIAL DATA BY PHARMACEUTICAL RESEARCHERS
First Combined Pharmaceutical Trial Data on Neuro-degenerative Diseases;
Shared Resource from Unique Public-Private Partnership Will Help Accelerate Alzheimer's, Parkinson's, and Other Brain Disease Research

Washington, DC – A new database of more than 4,000 Alzheimer's disease patients who have participated in 11 industry-sponsored clinical trials will be released today by the Coalition Against Major Diseases (CAMD). This is the first database of combined clinical trials to be openly shared by pharmaceutical companies and made available to qualified researchers around the world.

Data were mapped into CDISC standards for this database, which now has data from >> 6,000 patients and is freely available to researchers.

"Analyzing the non-standard format data we have received has been challenging.

It is much easier to work with the more recent data, which had made use of CDISC SDTM.

Having a TA standard specific to prostate cancer will be extremely useful."

Liz Zhou, MD, Sanofi DataSphere Data Analyst

ONE MIND

"One Mind is building on the efforts of the [international] TBI Research Community, NIH and the DoD to develop data standards, called Common Data Elements (TBI-CDEs). **Your support funded conversion of the TBI-CDEs to an internationally accepted set of Clinical Data Interchange Standards (CDISC),** a format approved by the FDA. Efforts have also led to creating standards that will reduce the time required for FDA acceptance of research findings and **accelerate the pace at which new diagnostics and treatments reach the patient**."

CDISC

CDISC Teams Developing New Data Standards for Ebola and Malaria!

"The World-Wide AntiMalarial Resistance Network (WWARN) and the Global Health Network work closely together and are keen to promote the use of the international data standards to ensure data integrity, validity and that the data collected are suitable for sharing, especially in low-resource settings.

The CDISC training (Paris 2014) has equipped me with the skills needed to implement the first steps for both groups to align with CDISC standards."

Lesley Workman, WWARN Pharmacology Scientific Coordinator, University of Capetown, South Africa

TransCelerate BIOPHARMA INC.

ACCELERATING THE DEVELOPMENT OF NEW MEDICINES

CFAST

Working through the TA Process of CFAST (a partnership of CDISC and C-Path) and collaborating with TransCelerate BioPharma, NCI, FDA, ACRO, IMI and NIH, TA standards have been developed for Asthma, Diabetes and many other therapeutic areas….

"This project was personal and meaningful for most of us from the beginning. Some of us are persons with Diabetes, have family members or friends with Diabetes, treat patients with Diabetes, or we work on Diabetes clinical trials during our day job."

Rachael Zirkle, CFAST Diabetes TA Standards Project Manager and Data Scientist for Eli Lilly

eTRIKS European Translational Information and Knowledge Management Services

efpia imi

Innovative Medicines Initiative (IMI)
European Translational Information & Knowledge Management Services (eTRIKS)

CDISC is co-leading the data standards work.

Building upon the open source tranSMART system, eTRIKS will provide a sustainable Knowledge Management Platform and Services to support Private/Public Translational Research across IMI, bringing curated data together from key IMI project consortia.

Curated data to be in CDISC format……

Innovative Medicines Initiative and CDISC

The NEW ENGLAND JOURNAL of MEDICINE

Fostering Responsible Data Sharing through Standards

Rebecca Kush, Ph.D., and Michel Goldman, M.D., Ph.D.

Children with muscular dystrophy and their families make sacrifices to engage in clinical research studies, providing valuable data they expect will contribute to the discovery of a cure, although they know it may not be found in time to help them. This message was emphasized at a recent meeting organized by the Institute of Medi- treatment of Alzheimer's disease have led several companies to begin collaboratively developing innovative study designs requiring extensive data sharing.

Unfortunately, the diverse ways in which data are collected and reported in clinical studies make it difficult or impossible to query across data sets, pool and share data, or integrate data for metadata, such confusion is inevitable. Units and other metadata are critical in medical research as well. Standard data and metadata formats are required for efficient aggregation of patient-level data, trustworthy statistical analyses, and accurately informed clinical decisions. When such standards are not implemented by all parties at the

Strength *through Collaboration*

The Research Landscape: Data Sharing

- **U.S. National Academies of Science Institute of Medicine (IOM): Committee to Report on Sharing of Data for Clinical Trials**
- **New England Journal of Medicine (NEJM): Series of Articles on Data Sharing**

- *Only ~ 45% of researchers share their data; 143 of 351 randomly selected papers complied with their data sharing policy*
- *Of 53 landmark basic science studies in oncology, Amgen could only reproduce results from 6.*

- *Data transparency, liquidity, liberation*
- *Data privacy, security, confidentiality*
- *Meta-analysis, data pooling and mining, clean vs. 'scruffy data, 'rogue data'*
- *Incentives/disincentives, especially for researchers*

Data Sharing – Recent Attention

- In late 2012, EU informed European Medicines Agency: ***"Clinical trial data is not commercial confidential information."***
- Recent series of **New England Journal of Medicine** Articles on Data Sharing
  - *Nisen and Rockhold (GSK) – "Access to Patient Level Data from GSK Clinical Trials"*
  - *Eichler, Petavy, Pignatti, Rasi (EMA) – "Access to Patient Level Trial Data---A Boon to Drug Developers"*
  - *Mello et al (Harvard) – "Preparing for Responsible Sharing of Clinical Trial Data"*
  - *Zarin (NLM) – "Participant-Level Data and the New Frontier in Trial Transparency"*

The Research Landscape: Data Sharing

- European Medicines Agency informed by EU Committee: ***"Clinical trial data is not commercial confidential information."***

"Data are like children; you like your own best and you don't like strangers to play with them." Hans Joerg Eichler, EMA

What about Data Standards? Formats?

- How are the data to be shared?
- Can the data be readily aggregated, analyzed and compared?

"Data are More Meaningful when SHARE'd… With Standards!"

We owe it to the patients who participate in research studies to use their data and to use it wisely.

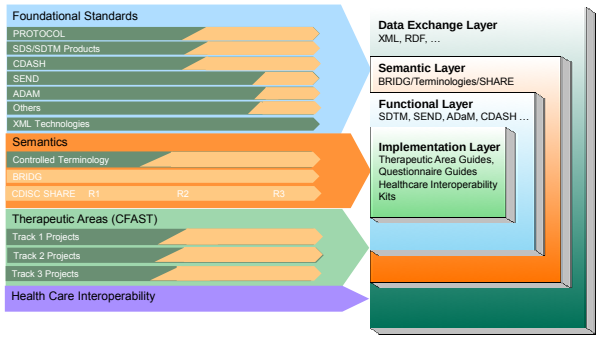
CDISC Technical Roadmap - 2014



The Roadmap depicts evolution from siloed standards to an integrated stack based on BRIDG and SHARE

CDISC

Shared Health and Research Electronic Library (SHARE)

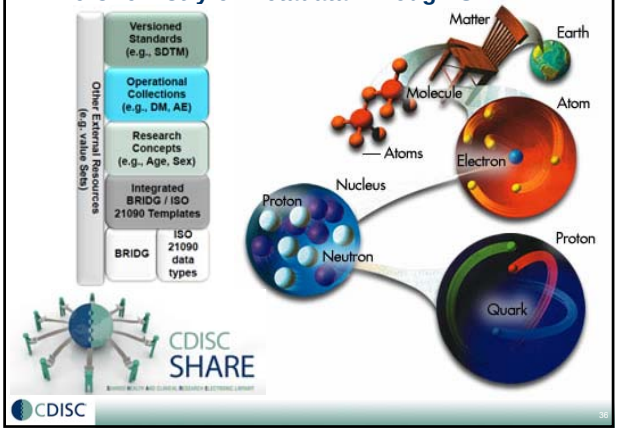
A global electronic repository for developing, integrating and accessing CDISC standards metadata in electronic format.

SHARE should dramatically improve the quality, reusability and integration across CDISC standards and controlled terminologies, and improve interoperability with healthcare.

SHARE is a requirement for standards-based automation, which is key to ROI from standards implementation

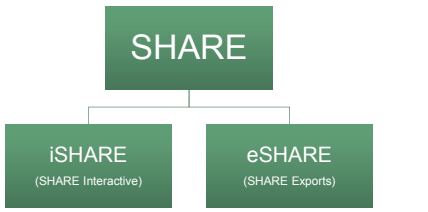
CDISC

The Chemistry of Metadata Through SHARE



CDISC

User Perspectives of SHARE



Standards Development & Governance

Accessing Published Standards in a Machine-Readable Format

R1
Q1 2014

SHARE R1: Initial Capability

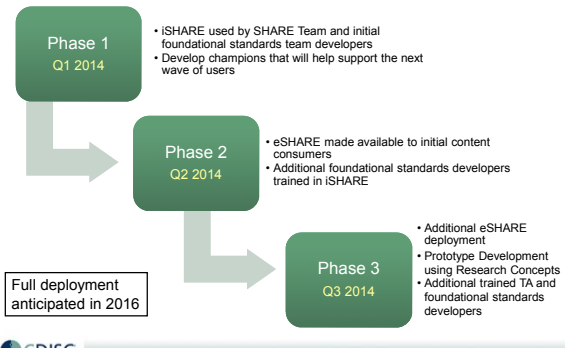
- First version of iSHARE
  - Implemented using SOA's Semantics Manager
  - Meta-model based on ISO11179, BRIDG and ISO21090/HL7 Datatypes
  - Cloud-based – hosted at Amazon
  - Exploring out-of-the-box functionality to develop, maintain and access CDISC standards.
- Load of Initial set of CDISC standards into SHARE
  - SDTM 1.2 (SDTMIG 3.1.2)
  - CDASH 1.1
  - BRIDG 3.2 and ISO21090
  - All CDISC Terminologies
  - New versions (e.g. SDTMIG 3.1.3, 3.2) now being added.

R1
Q1 2014

R1: Machine-Readable Standards and Basic Functions

- Export machine-readable standards
  - ODM v1.3.2
  - Define-XML v1.0 & v2.0
  - CSV / Tab delimited / Excel
- Version control & impact analysis
- Workflows (e.g. new requests, metadata governance)
- Reporting (e.g. governance metrics)

SHARE Near-Term Deployment Plan



License required to use iSHARE

eSHARE: Accessing SHARE Content

- Website for easy, one-stop download of SHARE machine-readable content
  - Metadata and Terminologies
- Export formats include:
  - ODM v1.3.2
  - Define-XML v1.0 & v2.0
  - CSV / Tab delimited / Excel
  - RDF/OWL (R2)
- Website for easy download of SHARE machine-readable content
- Initial pilot rollout to Platinum members in Q2 2014.

Agile Incremental Development Approach

- Each release will include incremental improvements in:
  - Expanded breadth of standards content
  - Standards quality & completeness
  - Relationships between metadata
  - Use of concepts to define standards and standards models
  - Ease of use refinements
  - New reports and metrics
  - Standards development and governance workflows
  - SHARE training and documentation
  - Reducing the reliance on spreadsheets and other document formats for standards development and governance
  - Efficiency in standards development and governance

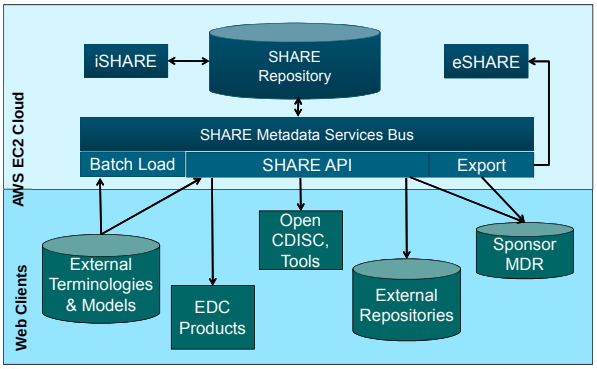
R2
Q4 2014

R2: SHARE Concept-based Standards

- Implementation of SHARE research concept model
  - Support for Therapeutic Area standards development
- Additional CDISC standards content (PRM, ADaM, SEND)
  - Single, trusted source for all CDISC data standards
- Expanded eSHARE content download site
  - Value Level Metadata content
- Improved Controlled Terminology process integration
- RDF/OWL export format
- Future releases will include:
  - Improved end-to-end standards integration
  - IG standards document generation
  - Support for other concept systems and increased interoperability.

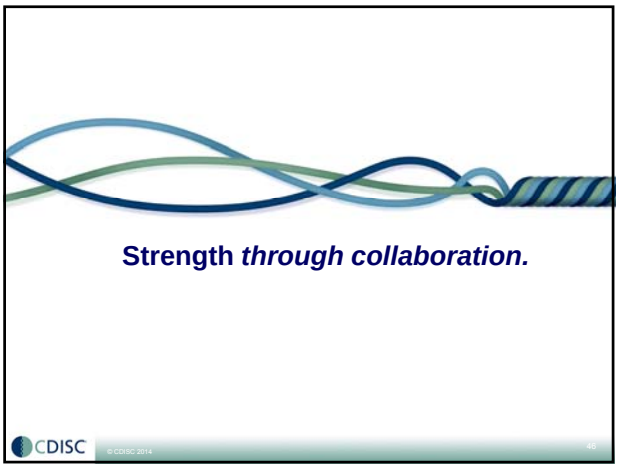
Rx
2015-2016

SHARE as a Knowledge Resource for Research



Standards on Internet Time

- Move from large pdf documents to electronic meta-data packages assemblies of small component objects
  - Research concepts separated from implementation format
  - Just-in-time modules: variables, domains, codelists, terms
  - Released for draft use individually when ready and later packaged into versioned assemblies
    - TAUGs create modules; teams publish versions
    - If later vetting requires changes – SHARE can track and support up-versioning changes
  - All new v1 domains & variables include validation rules
  - Example data files for testing, packaged for publication
- Requires an industry-wide, expert governance system
- A culture of change that can keep pace with science



Strength *through collaboration.*
