

Setting the
Global Standard
for Clinical Data

ODM

Vue d'ensemble avec impact
pour le Data Management

**CLINICAL DATA INTERCHANGE
STANDARDS CONSORTIUM**

Présentation du
04 Décembre 2009

Nicolas de SAINT JORRE

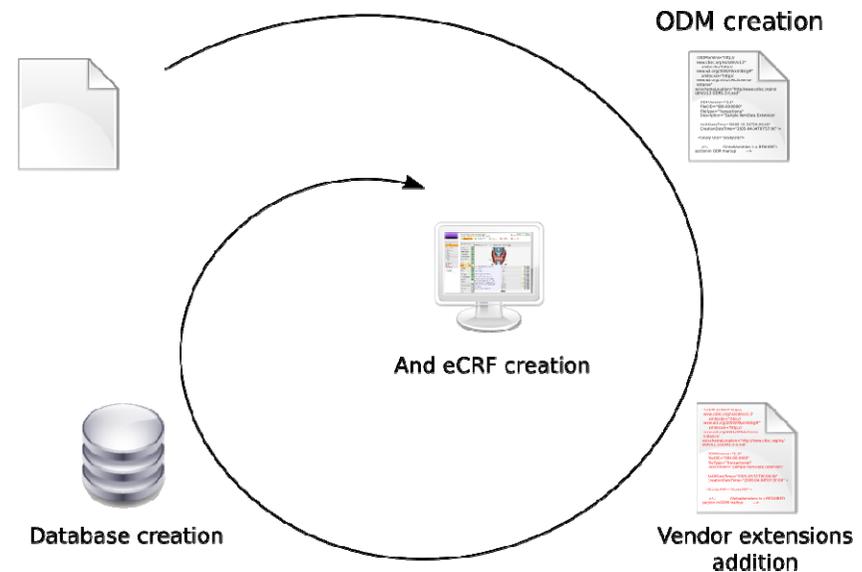

ODM: Operational Data Model

- Standard pour la collecte, l'échange et l'archivage de données dans le cadre d'une étude clinique (3 des 4 missions de CDISC)
- Neutralité architecturale et informatique
- Standard au format XML (via un schéma XSD)
- -> Traduction des objectifs d'un protocole clinique en cahier d'observation (avec une dimension standard électronique)
- Les versions en production :
 - (ODM V1.2.1)
 - (ODM V1.3)

Pourquoi utiliser l'ODM ?

- « The ODM can act as a shared vocabulary between Sponsor and Vendor, helping to eliminate confusion in the specification process. »

XML et XSD

- Conformité XML: contraintes de syntaxe et de sémantique
 - L'ODM doit être syntaxiquement correct
 - L'ODM doit être conforme avec le standard 'XML Namespace'
 - L'ODM doit être conforme avec 'odm1-3-0foundation.xsd' et avec 'odm1-3-0.xsd'
 - Et éventuellement, l'ODM peut être conforme avec des 'Extensions vendeurs'

```
<ODM xmlns="http://www.cdisc.org/ns/odm/v1.3"

```

Les attributs d'un ODM

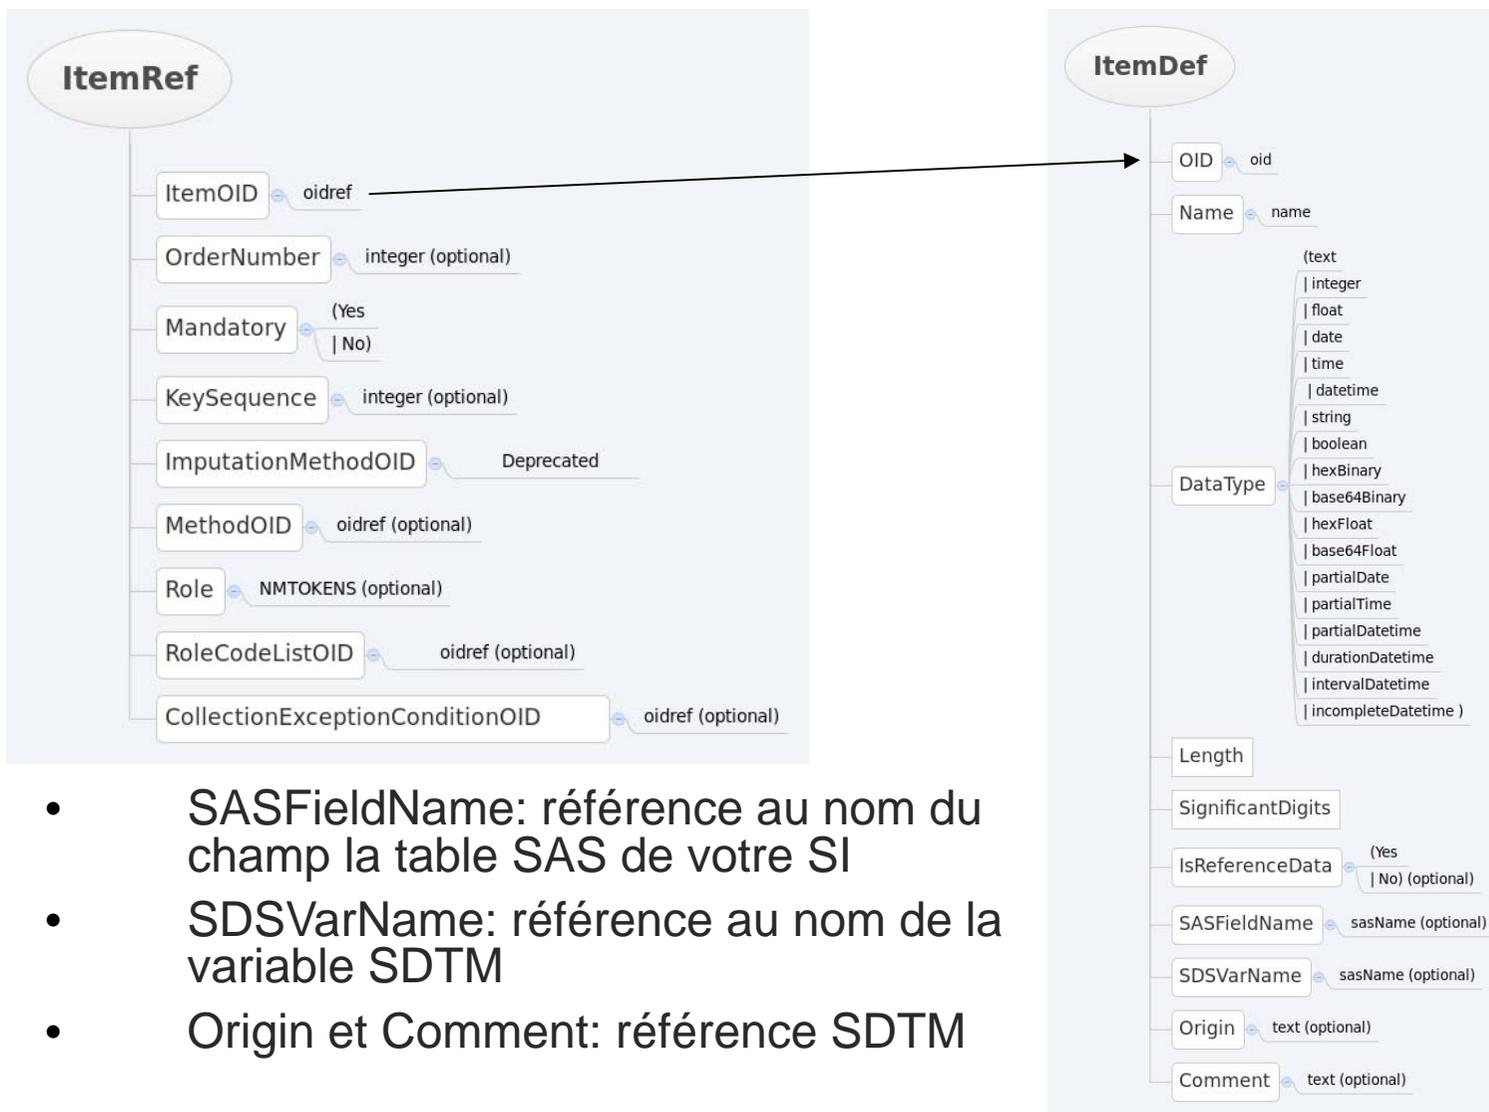

Les attributs d'un ItemGroupRef / Def

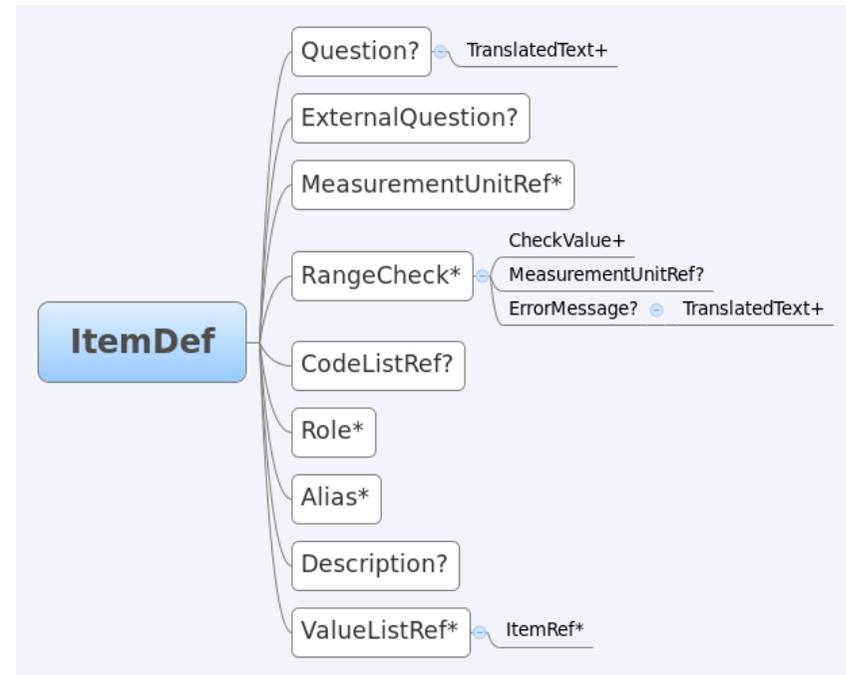

Les attributs d'un ItemRef / Def

- SASFieldName: référence au nom du champ la table SAS de votre SI
- SDSVarName: référence au nom de la variable SDTM
- Origin et Comment: référence SDTM

La structure d'un Item

- Question: label de la question en suivant CDASH (avec traduction possible)
- Idem pour ExternalQuestion (dans un dictionnaire de codage)
- RangeCheck: solution pour la vérification des données en fonction du type (LT Less than, LE Less than or equal to, GT Greater than, GE Greater than or equal to, EQ Equal to, NE Not equal to)
- CodeListRef: pour les items de type CodeList
