LOINC / UCUM / CDISC – Labordaten in Forschung & Versorgung

Berlin, Mo. 23.09.2013

LOINC: Standardisierte Kodierung (nicht nur) von Laboruntersuchungen – Einführung und Überblick

Sebastian Claudius Semler

Wissenschaftlicher Geschäftsführer,

Technologie- und Methodenplattform für die vernetzte medizinische Forschung e. V. (TMF), Berlin

Telematikplattform für Medizinische Forschungsnetze (TMF) e.V.

Was ist LOINC ?

LOINC[®] =

Logical Observation Identifier Names and Codes

- ↪ **Nomenklatur (Code-System)** zur universellen Kennzeichnung von Laborbestimmungen, Vitalwerten und weiteren klinischen Messungen/Beobachtungen
- ↪ Erstellt/gepflegt vom LOINC-Komitee am Regenstrief Institute / Indianapolis (USA) unter Beteiligung von
 - ↪ Freiwilligen aus dem akademischen Bereich
 - ↪ Freiwilligen aus der Industrie
 - ↪ US-Regierungsvertretern.
- ↪ Ursprüngliche Fokussierung auf den Laborbereich wurde auf sämtliche klinischen Mess- und Beobachtungsparameter erweitert.
- ↪ Funding: u.a. National Library of Medicine (NLM), Centers for Disease Control and Prevention (CDC), John A. Hartford Foundation

↪ www.loinc.org

↪ bereitgestellt als Access-Datenbank oder TXT-Datei

↪ gemeinfrei ! (Copyright-geschützt, aber zum freien Einsatz)

↪ User Manual in mehreren Sprachen (auch deutsch)
→ Ausführliches Handbuch mit Feldbeschreibungen

↪ Tools:

↪ Mapping-Tool RELMA[®] = Regenstrief LOINC Mapping
Assistant (mit eigener Datenbank)

↪ HL7-Prüf-Werkzeug HL7-LINT

↪ FAQ, Schulungsmaterial (Folien)

↪ Online Training

↪ User Forum

- More news...

The purpose of LOINC® is to facilitate the exchange and pooling of clinical results for clinical care, outcomes management, and research by providing a set of universal codes and names to identify laboratory and other clinical observations.

The Regenstrief Institute, Inc [2], an internationally renowned healthcare and informatics research organization, maintains the LOINC database and supporting documentation, and the RELMA mapping program. Regenstrief also maintains the Unified Code for Units of Measure (UCUM) code system, a related standard that includes units of measures being contemporarily used in international science, engineering, and business.

letzte strukturelle Änderungen:

v.2.26: Einführung Spalte LONG_COMMON_NAME

v.2.22: Verschiebung mehrerer Spalten aus der LOINC-DB in die RELMA-DB

v.2.19: Display mixed case; Umbenennungen in der Spalte SYSTEM

v.2.32: Erweiterung Feld STATUS

v.2.36: LOINC_NUM Erweiterung auf 10 Char., Streichung etlicher Felder (u.a. RELAT_NMS), Umbenennung Feld →DATE_LAST_CHANGED

v.2.42: Streichung MAP_TO Feld, stattdessen neue MAP_TO-Tabelle; neues Feld HL7_ATTACHMENT_STRUCTURE

LOINC Release Notes

```

+-----+
|  Version 2.44      |
|  Released June 2013  |
+-----+
  
```

LOINC version 2.44 contains 72,625 terms, an increase of 1,161 since the December 2012 version. Approximately 2,408 terms have been edited. A total of 2,168 terms have been deprecated.

Some highlights of the new content in this version include:

- 1) Over 600 drug induced platelet and neutrophil antibody terms.
- 2) More than 100 terms for antibiotic susceptibility testing.
- 3) Over 80 terms in toxicology, primarily related to synthetic cannabinoid testing.
- 4) New codes for the 2003 version of US Standard Birth Certificate and Fetal Death Report panels, LOINCs 68988-4 and 69045-3.
- 5) New codes for newborn hearing and critical congenital heart disease (CCHD) screening, added to the American Health Information Community (AHIC) newborn screening panel, LOINC 54089-8.
- 6) Terms for the Neonatal Skin Risk Assessment Scale (NSRAS), LOINC 73790-8.

↪ PROPERTIES & UNITS – Einige Beispiele:

<i>PROPERTY</i>	<i>Name</i>	<i>Category</i>	<i>UNITS (exempl.)</i>
ACNC	Arbitrary Concentration	Arbitrary Unit Measures	UNITS/L, IU/L
CCNC	Catalytic Concentration	Enzymatic Activity	IU/L
MCNC	Mass Concentration	Mass	GM/L, MG/DL usw.
MCRTO	Mass Concentration Ratio	Mass	NG/MG
MRAT	Mass Rate	Mass	GM/24h, MG/D usw.
NARIC	Number Areic (number per area)	Counts	/HPF
NCNC	Number Concentration (count/vol)	Counts	10 ¹² /L, CELLS/UL
NFR	Number Fraction	Counts	% LYSIS, /100 RBC
SCNC	Substance Concentration	Substance Amount (Moles/Milliequivalents)	MOL/L usw.
SCNT	Substance Content	Substance Amount (Moles/Milliequivalents)	FMOL/MG PROTEIN
SCRTO	Substance Concentration Ratio	Substance Amount (Moles/Milliequivalents)	MMOL/MOL CREAT
SRAT	Substance Rate	Substance Amount (Moles/Milliequivalents)	MMOL/24H
VFR	Volume Fraction	Volumes	L/L
VRAT	Volume Rate	Volumes	ML/MIN
VRTO	Volume Ratio	Volumes	VOL%

Anwendungsfälle für LOINC ?

- LOINC in der Patientenversorgung
- LOINC in der medizinischen Forschung
- LOINC in HomeCare, TeleMonitoring etc.

- ↪ Standardisierte Datenkommunikation
- ↪ LOINC ist in den gängigen Datenaustauschformaten nutzbar:
 - ↪ HL7 – OBX-Segment ⇒ Feld OBX-3 (Observation Identifier)
 - ↪ auch HL7 v.2 XML
 - ↪ LDT – Standard ⇒ Feld 8410 (n) Test-Ident (M) LOINC-ID
 - ↪ CDISC LAB (+SDTM)
 - ↪ CCR
 - ↪ openEHR
- ↪ auch in standardisierten digitalen Dokumenten
 - ↪ HL7 v.3 – CDA
 - ↪ z.B. VHitG-Arztbrief
 - ↪ SCIPHOX

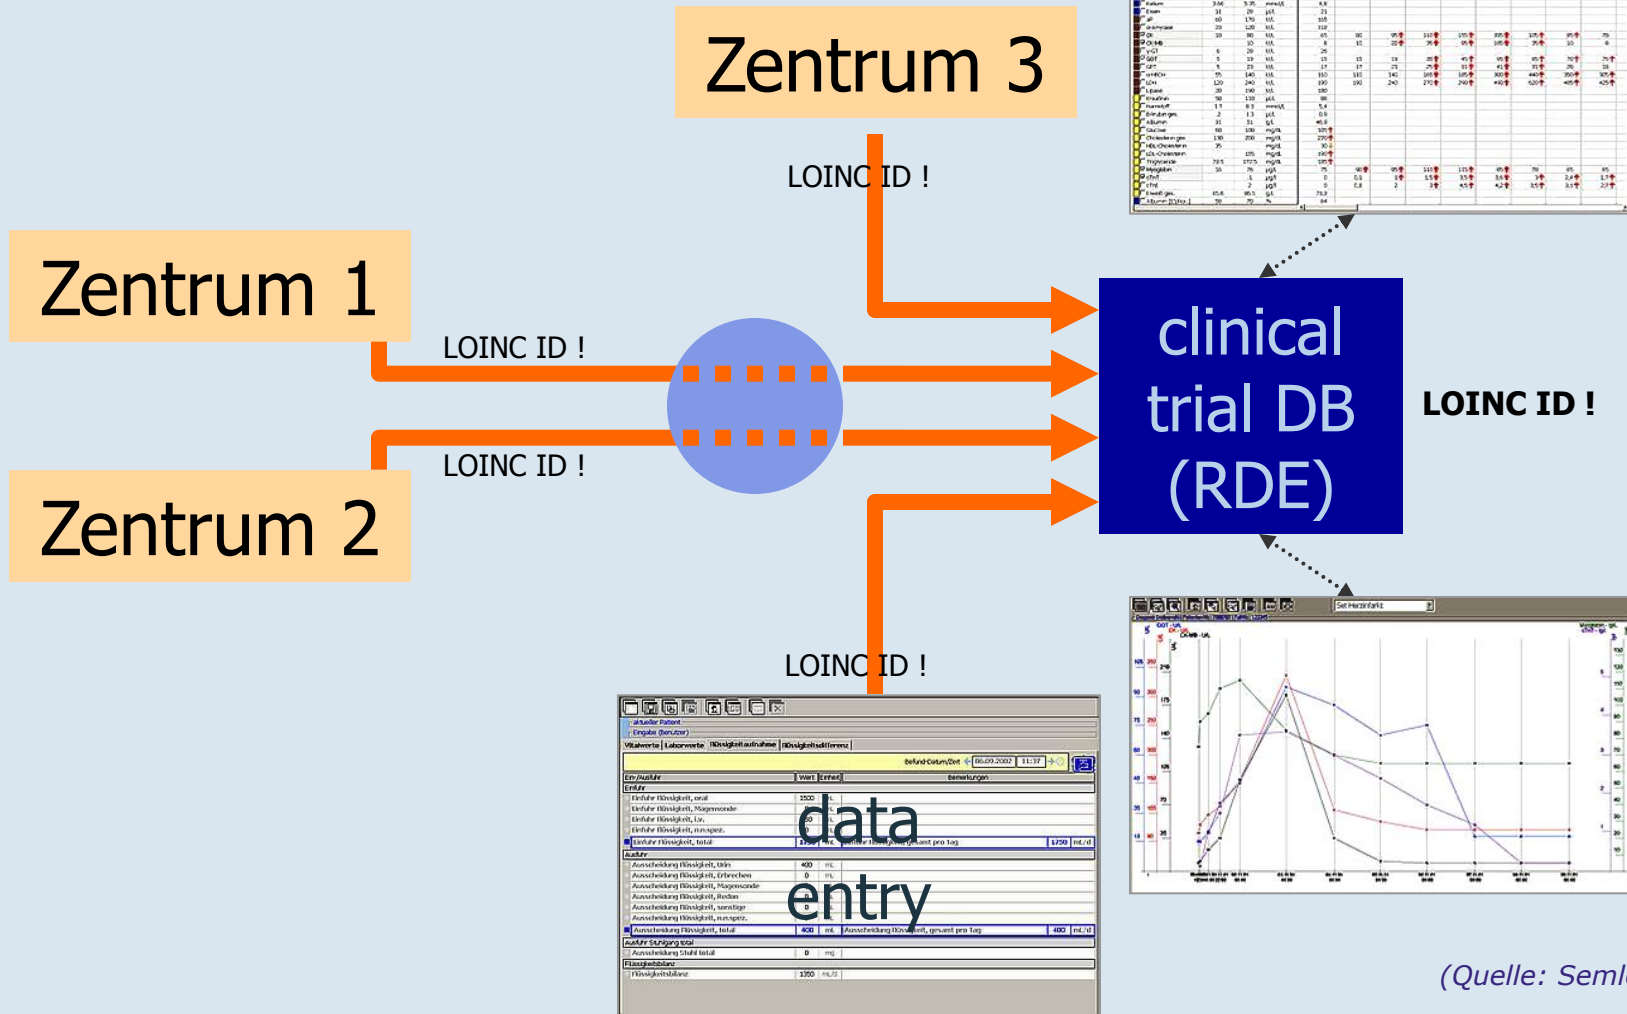

Example: the use of an international nomenclature für coding of medical observations (LOINC)

the general problem: fusion of medical observation data from multiple sources

... different identifiers for the same medical observation ?

+
LOINC-ID:
2324-2

LOINC-Code steht in OBX-3.1 !

- ↪ LOINC und HL7
 - ↪ von HL7 international empfohlen zum Kennzeichnen der Laboruntersuchungsarten (v.2 + v.3 / RIM)
 - ↪ Zusammenarbeit von LOINC Committee und HL7 Gruppe
- ↪ LOINC und CDA / SCIPHOX
 - ↪ dito (↔ HL7)
 - ↪ Einsatz von LOINC-Codes zur Kennung der Document Sections (siehe VHitG-HL7-Arztbrief).
- ↪ LOINC und DICOM
 - ↪ LOINC auch im DICOM-Protokoll nutzbar. Aber auch Überlappungen (CLASS = RAD Codes in LOINC).
- ↪ LOINC und UMLS
 - ↪ Mapping existiert an der NLM (Umfang? Einsatz?)
- ↪ LOINC und SNOMED CT
 - ↪ Grundsätzlich ist jeder LOINC-Code durch einen SNOMED-Term abbildbar. Mapping nicht vorhanden.

- ↪ LOINC und IHE Lab.
 - ↪ LOINC empfohlen in der Labordatenkommunikation
 - ↪ IHE Technical Framework liefert Beispieltabelle mit empfohlenen gängigen LOINC-Codes
- ↪ LOINC und openEHR
 - ↪ LOINC wird in der Modellierung von Archetypen intensiv genutzt (siehe jüngste Diskussionen in der openEHR-News-Group)
- ↪ LOINC und CDISC
 - ↪ LOINC nutzbar im CDISC-Standard LAB und von CDISC hierfür empfohlen
 - ↪ LOINC grundsätzlich nutzbar im CDISC-Standard ODM
 - ↪ LOINC nur begrenzt nutzbar im CDISC-Standard SDTM
 - ↪ Einsatz bislang nur experimentell, kein Echtbetrieb (zumindest in D und UK)

- ↪ LOINC und xDT (nur D)
 - ↪ LOINC wird in LDT angewendet

„Problemzonen“:

- ↪ Overlap LOINC & VITAL
- ↪ Overlap LOINC & C-NPU
- ↪ Vermeintlicher Overlap zu SNOMED (CT) ist eher ein „strategisches Missverständnis“.

- ↪ allgemeiner Nutzen:
 - ↪ Austausch von Information = funktionelle Interoperation
 - ↪ Gebrauch von Information = semantische Interoperation
- ↪ Zusammenführung von Labordaten und anderen Messdaten
- ↪ Qualitätssicherung
- ↪ Übertragbarkeit und Auswertbarkeit in anderem Kontext
- ↪ (Mapping auf Abrechnungspositionen)

- ↪ Generell: Weiterverarbeitbarkeit von klinischen Daten !

- ↪ **hoher Mapping-Aufwand von lokalen Untersuchungen und ihren Kürzeln auf die richtigen LOINC-Codes**
 - ↪ Filter in der LOINC-Datenbank nutzen
 - ↪ **RELMA benutzen ?!**
- ↪ fehlende Codes
- ↪ zu hohe Granularität
- ↪ fehlende Hierarchien, keine „sprechenden Codes“
- ↪ komplexe Logik mit Einheiten- und Referenzwertverwaltung erforderlich
- ↪ Overlap zu anderen Standards
 - ↪ C-NPU
 - ↪ VITAL
 - ↪ SNOMED
- ↪ keine deutsche Übersetzung, keine fachliche Guidance

Wichtig: Was ist LOINC nicht ?

- ↪ LOINC ist keine Taxonomie, keine Klassifikation i.e.S. – sondern eine hochgranulare Code-Liste (ein „dummes“ Vokabular mit kaum Beziehungen der Codes untereinander).
- ↪ LOINC ist kein Datenaustauschformat und kein Datenkommunikationsprotokoll – sondern kann in solchen Datenaustauschformaten und Protokollen benutzt werden (HL7, xDT, CDA u.a.).
- ↪ LOINC ist kein komplettes Informationsmodell für Laborbestimmungen (das wären z.B. openEHR-Archetypen).
- ↪ LOINC ist kein Standard für die Einheitenverwaltung von Messgrößen (das ist UCUM) – LOINC unterscheidet lediglich unterschiedliche Messgrößen (PROPERTY) je Analyt / Beobachtung / Komponente.
- ↪ LOINC ist kein Standard für die Verwaltung und Angabe von Referenzwertebereichen (Normalwerten).

The purpose of LOINC® is to facilitate the exchange and pooling of clinical results for clinical care, outcomes management, and research by providing a set of universal codes and names to identify laboratory and other clinical observations.

The Regenstrief Institute, Inc, an internationally renowned healthcare and informatics research organization, maintains the LOINC database and supporting documentation, and the RELMA mapping program. Regenstrief also maintains the Unified Code for Units of Measure (UCUM) code system, a related standard that includes units of measures being contemporarily used in international science, engineering, and business.

RELMA = Regenstrief LOINC Mapping Assistant

Finden von LOINC-IDs in „Panels“

The screenshot shows the RELMA software interface with the 'Panels, Forms & Surveys' window. A dialog box titled 'Find Panels With These LOINC(s)' is open, showing the LOINC ID '724-5' entered in the search field. The 'Find Panels With:' section has 'Any Of These LOINC(s)' selected. A red arrow points from the 'Find panels with these LOINC(s)' button in the background window to the search field in the dialog box. Another red arrow points from the 'OK' button in the dialog box to the 'Panels With Any Of These LOINC(s): 724-5' window.

The 'Panels With Any Of These LOINC(s): 724-5' window displays a table of results:

LOINC	Shortname	Component	Property	System	Time	Scale	Method	#LOINC(s)	LOINC(s) in this Panel
34559-5	Cell Cnt Pnl Snv	Cell count panel	-	Synv fld	Pt	Qn		1	724-5
34560-3	Cell Cnt + Diff Pnl Snv	Cell count & Differential panel	-	Synv fld	Pt	Qn		1	724-5

At the bottom of the results window, there are buttons for 'Wrapped Text', 'Custom Export', and 'Print'. The 'OK' button is at the bottom right.

Details for Part record # LP15590-0

LP15590-0 Gamma glutamyl transferase

DESCRIPTION
 SOURCE: Wikipedia
DESCRIPTION: Gamma glutamyl transferase (GGT or GGTP, or Gamma-GT) (EC 2.3.2.2) is a liver enzyme. It is involved in the transfer of amino acids across the cellular membrane and in glutathione metabolism. GGT is found in high concentrations in the liver, bile ducts and kidney. The enzyme is also present in other tissues, such as the epididymis. Its level in the blood may be tested for, as an elevated level may indicate an abnormality in the liver, though this can be caused by a number of conditions including: congestive heart failure cholestasis (congestion of the bile ducts)cirrhosis of the liverRestricted blood flow to the liverNecrosis of the liverLiver tumors hepatitis hepatotoxic drugsIts levels are increased in chronic and acute alcohol abuse.

Semantische Standardisierung als essentielle Voraussetzung für:

↪ kontextunabhängige maschinelle Weiterverarbeitbarkeit medizinischer Daten

also z.B.:

↪ Zusammenführen von Labordaten aus unterschiedlichen Laboren innerhalb einer Klinikette

↪ *Zusammenführen von Labordaten aus unterschiedlichen Laboren in einer multizentrischen klinischen Studie*

↪ sektorübergreifende Kommunikation von Labor- und Vitaldaten in der integrierten Versorgung

↪ Datenintegration v. Home Care Devices / Body Area Networks

↪ Aggregation und Auswertung von klinischen Daten für Management, Qualitätssicherung oder Forschung

↪ *Epidemiologie, Versorgungsforschung, Public Health*

↪ übergreifende Grid-basierte IT-Infrastrukturen

↪ Datenkommunikation über Landes- & Sprachgrenzen hinweg

↪ Relevanz für die pharmazeut. Industrie und die CROs?

↪ Vorerfahrungen u.a. bei Schering, Parexel

↪ Welche Hürden gibt es ?

↪ Welche Hilfestellung muss geboten werden ?

↪ Von wem ?

↪ DIMDI

↪ LOINC User Group und HL7 User Group Deutschland

↪ TMF

↪ **CDISC USER GROUP ??!**

Vielen Dank für Ihre Aufmerksamkeit!
